

Perch Lake

Fisheries

Primary specie- Northern Pike, Bass
Secondary specie- Bluegills

Water Quality Assurance

Current TSI Goal: Not established
Current 2001 TSI: 49.0

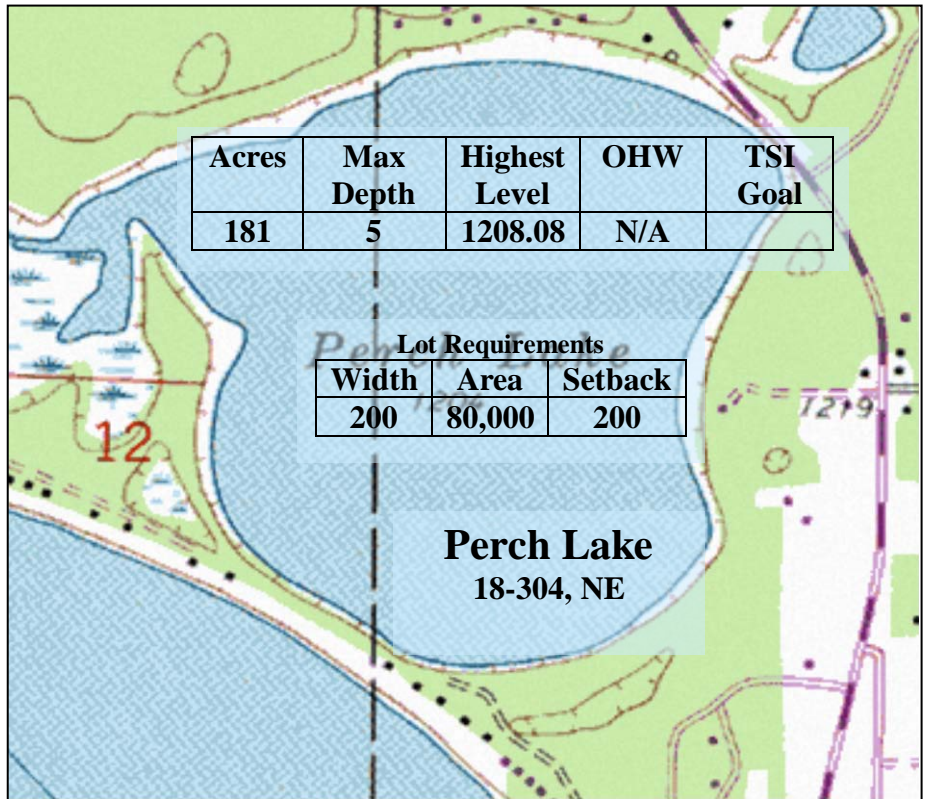

Water Quality Summary

Synopsis:

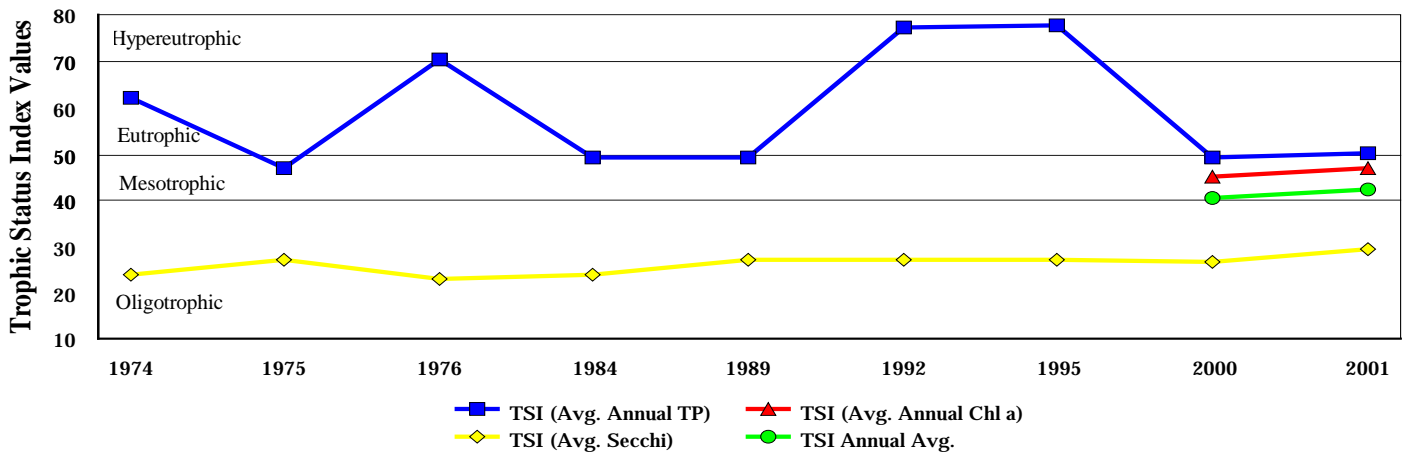

Perch Lake does not have an established TSI goal. The average TSI value observed through 2001 is 49.0. The lake is bordering between eutrophic and mesotrophic. The data appears stable with the exception of the increase in all indicators in the August 2001 sample.

Management Strategy:

1. Continue lake monitoring and yearly overflights
2. Develop and implement storm and wastewater management plans.
3. Conduct a Werring Procedure.
